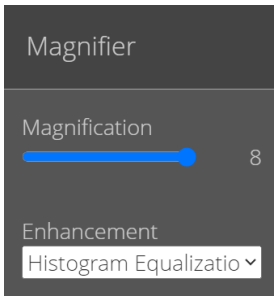
Julianna Russo, Gianna Julio, Daisy Kopycienski CMPT417 - Hacking and Pen Testing
4/12/24 Tulips

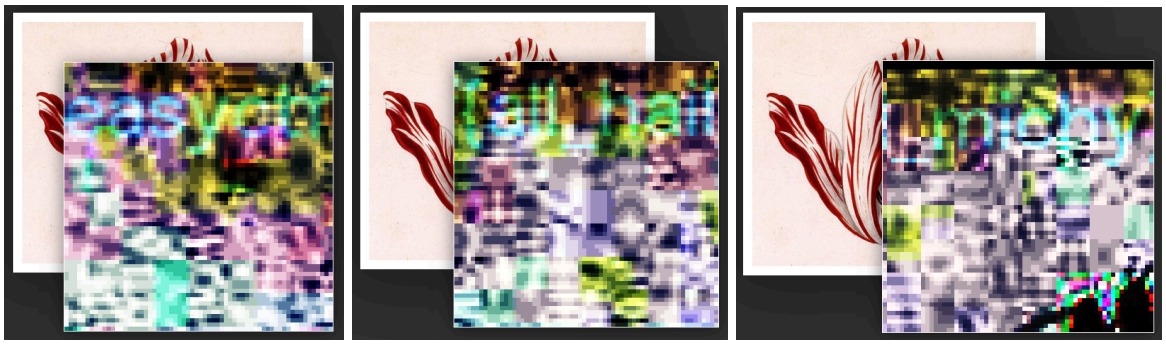
This assignment investigates other methods used to hide data within an image file with steganography, specifically histogram equalization.

Let's play capture the flag. My friend Michy uses this cool historical painting of a tulip as her profile picture. Everyone thinks she's the most awesome software developer on campus. Using steganography, we've hidden a flag somewhere in this assignment. The flag is a piece of text with the format

easyctf{xxx}, where xxx is the flag that you want to find (worth 10 points).

Hint: everything you need is in the image, but you might need to take a much closer look at the image histogram equalization. If you don't know what that means, perhaps this handy tool can help: https://29a.ch/photo-forensics/#forensic-magnifier





Using the magnifier tool and enhancing the histogram equalization, the flag easyctf{**all_hail_michy**} is revealed.
